To,
The Hiring Manager,
The Talent Acquisition Team

Dear Hiring Manager,

I'm a data professional living across the entire data lifecycle - from tuning low-level SQL queries in production databases to building scalable cloud pipelines and crafting interactive dashboards that business leaders actually rely on.

Whether a team needs a **Data Engineer**, **Data Analyst**, **SQL Developer**, or **BI/Visualization Specialist**, I bring a hybrid background that bridges technical infrastructure with commercial insights.

Here is a quick snapshot of what I bring to the table:

- **Deep SQL & Database Tuning:** As a Cloud Support Associate at AWS, I diagnosed performance bottlenecks across 150+ production database workloads on RDS and Aurora. I don't just write queries; I know how to optimize indexing, troubleshoot execution plans, and boost overall workload performance.
- **End-to-End Pipeline Engineering:** I build scalable cloud ETL/ELT architecture using Python, PySpark, Databricks, and modern cloud platforms across AWS and Azure. From implementing Medallion lakehouses to managing real-time data flows with Kafka, I focus on building reliable pipelines that don't break at scale.
- **Analytics & Business Impact:** During my time at Deloitte, I validated and analyzed financial datasets scaling past 30 million records, automating audit workflows with SQL and Spark to cut turnaround times by 20%.
- **Data Visualization & Modeling:** I build clean dimensional data models and interactive Power BI reports using DAX and Power Query. My goal is always the same: turn complex, high-velocity data into intuitive, decision-ready visual stories.

I love solving messy data problems, untangling performance bottlenecks, and turning raw numbers into clear answers.

If you're building a team or looking for someone who can hit the ground running across engineering, SQL development, or analytics, I'd love to connect!

Feel free to reach out directly via **dabral.aduet@gmail.com** or connect with me on [LinkedIn](#).

Best,

Aduet Dabral
